

Openssl - Commandes de conversion

De PFX vers .crt et .key :

- Extraire et décoder la clé privée

```
openssl pkcs12 -in <chemin/vers/pfx> -nocerts -out private.key  
openssl rsa -in private.key -out private_unencrypted.key
```

- Extraire le certificat

```
openssl pkcs12 -in <chemin/vers/pfx> -clcerts -nokeys -out certificate.crt
```

De .crt & .key vers .pfx

```
openssl pkcs12 -inkey private.key -in certificate.crt -export -out myfile.pfx
```
